#### INTERNATIONAL PROJECTS

---

1. RRReMaker. Research and Innovation Staff Exchange (RISE). H2020-MSCA-RISE-2020. Horizon 2020 Marie Skłodowska-Curie (**2021-2024**). (**Members: Spain, Italy, France, Chile, Greece, Perú, Switzerland, Malta**). **Principal Researcher (in Chile)**, researcher associate. The main objective of this project is to develop an artificial intelligence (AI) based maker platform for the design and production of handcrafted, rapid prototyped and reconditioned products, based on the availability of used goods and recyclable waste collected, getting inputs from, and connecting together, digital manufacturers and traditional crafts, designers/creative companies and green companies, establishing a new hybrid managing model based on the communities of knowledge, ecodesign and democratization invention, integrating orange, sharing and circular economy. URL <https://www.rrremaker.com/>
2. STIC-AMSud. FERMI (Feature Extraction and Recognition Methods for Biological Images Understanding) (**2014-2016**). (**Members: Peru, Brazil, France and Chile**). STIC-AmSud regional project. **Principal Researcher (in Chile)**. This project aims at developing of new algorithms, techniques, and tools to process biological digital images to detect and recognize patterns into the images. An important issue is that images can be acquired from different sources (micrography, electronic microscopy, digital images, microarrays, and others) and can represent various biological organisms and natural objects. With this project we will join the expertise of the research groups involved from the Pontifical Catholic University of Peru (Peru), University of Sao Paulo (Brazil), Pontifical Catholic University of Chile (Chile), Adolfo Ibáñez University (Chile) and the Institut de Biologie Structurale at Grenoble (France).

#### FRENCH PROJECTS

---

3. BRAHMA. UPMC-ISIR, France. (**2008-2009**). Doctoral student researcher. Title: “Utilisation de la coordination oeil-main pour la prédiction d'un geste de préhension”. This project aims to develop a novel approach to recognize the user's gesture based on the visual information captured from the user perspective. Generally, most motion recognition methods capture user's movements by tracking body parts. Instead, I developed a system that captures the scene using the user's gaze, and the grasp movement. My fellowship was funding by CONICYT – Colegio Doctoral Franco-Chileno under grant no. 21050185 and by the School of Engineering at Pontificia Universidad Católica de Chile.
